FTP-Stream Upload Form Widgets

## Outline

An Upload widget by Maytech is a snippet of HTML that can be embedded into your corporate web page to enable Maytech's fast file transfer functionality on your website.

Upload form widgets save you time and improve workflow efficiency by allowing you to easily collect files, along with any additional data you need from customers, without them ever leaving your website. This keeps your customer's focus on your website and ensures a very easy file transfer experience.

## How it works

## Widget Development and Installation

### Form Design and Functionality

The widget can include any standard HTML form fields including: text inputs, textareas, select lists, radio buttons, checkboxes etc and set any of them to be compulsory. The form can be arranged in any layout to suit your requirements.

Either specify the form content simply by sending us a list of form fields, or send us existing forms with your custom styling that we will make your widget from. In either case we return a five-line snippet of HTML which your web designer just pastes into your web page.

Depending on the Widget plan purchased, you can exactly match page style using CSS and add form field validation functionality.

Widgets can be served embedded in the web page or as a button and popup if you prefer.

### Organising Uploaded Files

Folders can be automatically created for uploaded files using values from the form fields or any system value. So if for example you have a form with 1) a select list for Account Manager 2) A text field for Order number, you can write files into a folder structure like:

```
/John Smith/18-Jan-2013/55667788
```

## Widget Plans

Widgets are available in three tiers and the functionality is shown in the table below.

Function	Tier 1 - Basic	Tier 2 - Custom	Tier 3 - Specialist
Custom Value Fields	✓	✓	✓
Compulsory Fields	✓	✓	✓
Custom Styling	-	✓	✓
Structured Destination Folders	-	✓	✓
Field validation	-	-	✓
Order Process Integration	-	-	✓

## Widget Examples

### Tier 1 Widget with Standard Styling

A screenshot of a standard web form. It includes input fields for Name, Company, Email, and Order number. There are dropdown menus for Region (set to North) and Despatch method (set to Collect). A text area for Instructions contains the text "Please specify instructions". At the bottom, there is a newsletter sign-up section with radio buttons for Yes and No, and a file upload section with a "Select Files" button and a "Start Upload" button.

### Tier 2/3 Widget with Custom Styling

A screenshot of a more complex web form with a grey background. It includes input fields for Name, Company, Email, and Phone Number. There are also input fields for Job Number and Job Description. A large text area for Comments is present. Below the comments is a section titled "Select a file to upload" which contains a table of uploaded files:

Name	Size	Status
Component.jpeg	10.9K	Queued
AbstractArt.png	37K	Queued
DesignerShoes.jpeg	61.5K	Queued

Below the table is a "Select Files" button and a paragraph of instructions: "File(s) are ready for upload when the status is 'Queued'. To complete your upload you must fill out the form above and click 'UPLOAD NOW'. A confirmation message will appear once the upload process is complete." At the bottom right is a blue "UPLOAD NOW" button.

## Pricing

### Widget Package Pricing per Year

Some installations require additional functionality. Maytech Professional Services can quote for any additional development work.

### £ Widget Packages

GBP	Tier 1 - Basic	Tier 2 - Custom	Tier 3 - Specialist
FTP - 10	604	904	1404
FTP - 20	835	1135	1635
FTP - 50	1325	1625	2125
